

Storm Drain Marking

Help protect the District's waterways - mark a storm drain today!

Did you know?

Unlike sanitary sewers, storm sewers discharge directly into waterways. Therefore, any oil, dirt, chemicals and trash on the streets, sidewalks and parking lots that goes into storm drains goes into our waterways.

The idea behind the District Department of the Environment's (DDOE) **Storm Drain Marking** program is simple: educate residents that when they dump something down the drain, it just doesn't disappear or go through a treatment plant. Less dumping means cleaner waterways.

By placing a storm drain marker like the one shown below, you can remind your neighbors that what they dump into the storm drains will drain to our rivers, streams and wetlands.

To volunteer to place storm drain markers, contact:
Andy Oetman, 202-535-1735
